To avoid these problems, make sure Steam is running when trying to launch Tomb Raider. To do this, just follow these simple steps:

>> Make sure Steam is running. Steam needs to be open in order to play Tomb Raider. If it's not running, then you can get Tomb Raider to launch by opening the folder containing the game, right-click the Tomb Raider executable file (.exe) inside it and select "Run as administrator." If you are unsure of what Steam is located inside your system directory, click here to find out!

>> Restart your PC in Safe Mode. Restarting your system in Safe Mode may fix issues with Tomb Raider. What's Safe Mode? Safe Mode lets Windows start your computer with a minimal set of drivers and programs, instead of the default drivers and programs that are active when you first turn on your computer. Safe Mode will help to fix lagging or crashing issues during gaming sessions, so if Tomb Raider is crashing, try restarting in this mode! You can do this from the Start menu or from the Control Panel (start-> control panel).

>> Run an antivirus scan. Antivirus scans may detect and fix the issue with Tomb Raider. If Tomb Raider crashes when started this way, then try downloading an antivirus program like MalwareBytes at: http://www.malwarebytes.org/. Perform a full scan on your computer to ensure there aren't any problems. If MalwareBytes detects anything that might be an issue, then follow instructions to remove it!
